

1 gallon of water weighs 8.345 lbs. / 3.78

The **Responder S** solar powered water purification system weighs 45 lbs / 20.4 and will produce it's own weight in clean safe drinking water in less than five (5) minutes from almost any creek, stream, pond, well, lake or most any fresh water source. **Why haul water you don't have to?**

What Do These Adventure Tours Have In Common?

- River Rafting
- Hunting Safari
- Climbing Expeditions
- Horseback / Pack Trips
- Canoe Trips
- Charter Fishing
- Backpacking Trips
- RV Caravans

They all need to provide clean safe drinking water to their clients!

The most common solutions to this problem are to:

- Carry hundreds of pounds of water with you, taking up valuable space in your tour bus, boat or other vehicle.

- Provide each client with a "personal" water filter system, that only filters the water, and does not remove bacteria or viruses.
- Do nothing! And risk your clients health and your companies reputation.

For most activities, our solar powered briefcase sized unit is ideal! It weighs only 35 pounds and can produce 1 gallon per minute (up to 100 gallons per day) of clean safe drinking water.

For permanent camps, or tour sites, we manufacture stationary systems (ground or wall mounted), that can produce 10 to 15,000 gallons of drinking water per day.

How long does it take to fill a 1-gallon jug? (The answer is 10 minutes, and you can find out more about it on the website.)
